SUMMARY

Data scientist with four years of applied experience building machine learning models and SQL data pipelines for a nonprofit education partnership in South King County. Sole data scientist: built predictive and inferential models in Python, automated an eligibility system covering 8,000+ students a year, and partnered with the data engineer on the warehouse and dbt pipelines. Former math teacher; completing an MS in Analytics at Georgia Tech.

EXPERIENCE

Community Center for Education Results (CCER) — Seattle, WA

Data Scientist — Apr 2022 – Jun 2026

Sole data scientist for a nonprofit that measured and improved education outcomes in partnership with South King County school districts, colleges, and community organizations. Organization closed June 2026.

- Built predictive models in Python (scikit-learn, XGBoost, LightGBM, statsmodels) to forecast student dropout, graduation, and postsecondary enrollment, using SHAP to interpret drivers and inform interventions.
- Implemented an automated system in SQL and dbt to assess college readiness and determine admission eligibility for 8,000+ students annually, eliminating manual review and replacing a costly third-party service.
- Partnered with the data engineer to build and maintain an Azure SQL data warehouse, with dbt pipelines integrating state, national, and district sources (OSPI/CEDARS, ERDC, SBCTC, NSC) into reporting-ready tables.
- Designed and maintained Tableau dashboards for 7 partner school districts, focusing them on key metrics so partners could act on results. Converted dashboards into PowerBI.
- Conducted quantitative and qualitative analyses in SQL to inform policy recommendations and strategic decisions for seven partner school districts.

BehAIvior — Pittsburgh, PA (Remote)

Data Scientist Intern — Jan 2022 – Apr 2022

- Built a time-series algorithm to detect outliers in emotional states for people in recovery, alerting care providers when an individual may benefit from a check-in.

Alliance College-Ready Middle Academy #8 — Los Angeles, CA

Math Teacher — Jul 2015 – Dec 2019

- Designed and implemented data-driven lesson plans by analyzing student performance, misconceptions, and assessments, leading to improved understanding and outcomes.

SKILLS

Machine Learning
Classification and regression, scikit-learn, XGBoost, LightGBM, Model interpretation (SHAP), NLP, Neural networks (PyTorch, TensorFlow)

Statistics and Experimentation
Hypothesis and A/B testing, Bayesian statistics, Causal inference (propensity score matching, difference-in-differences), Time-series analysis

Programming and Data Engineering
Python (pandas, NumPy), R, SQL / T-SQL, dbt, ETL/ELT pipelines, Azure SQL, Git

BI and Visualization
Tableau, Power BI, Excel, Matplotlib, Seaborn, Plotly, Data storytelling

EDUCATION

Georgia Institute of Technology — Atlanta, GA (Online) • Aug 2025 – Present

Master's in Analytics (in progress, part-time)

Claremont Graduate University — Claremont, CA • May 2014 – Aug 2015

Master's in Education

University of Washington — Seattle, WA • Sep 2008 – Dec 2012

Bachelor's in Mathematics
